EDUCATION

University of California, Berkeley

Bachelor of Arts in Computer Science

Berkeley, CA

May 2026

Coursework *Software Engineering, Computer Architecture, Computer Security, Data Structures and Algorithms, Efficient Algorithms and Intractable Problems, Full-Stack Web Development, Internet Protocols.*

EXPERIENCE

Vendo (YC S26)

Software Engineer

May 2026 – Present

San Francisco, CA

- Build an open-source TypeScript platform embedding a customizable AI agent in other companies' products.
- Engineer the mounting layer so a single build ships across several host layouts without duplicated logic.
- Integrate **3** services (Gmail, Slack, and Calendar) behind consent granted one service at a time, never all at once.

Handshake AI Fellowship

AI Trainer, Software Engineering and Coding Domain

Jun. 2026 – Sept. 2026

Berkeley, CA

- Evaluated and scored **700+** frontier LLM responses on multi-turn software engineering and coding tasks.
- Rated completions on a **1–7 scale** across **5** rubric dimensions, from technical clarity to communication style.
- Authored written rationales per score and ran comparative preference evaluations across candidate answers.
- Passed a rigorous calibration screening and sustained high inter-rater agreement across production data.

UC Berkeley, EECS

Academic Intern, CS 70 (Discrete Mathematics & Probability)

Aug. 2025 – Dec. 2025

Berkeley, CA

- Facilitated **2** weekly problem-solving sections for **30+** students across a full semester of discrete math.
- Delivered selected lectures and walkthroughs converting abstract theory into step-by-step solutions.

Cubstart Program, UC Berkeley

Teaching Assistant, Full-Stack Web Development

Aug. 2024 – Dec. 2024

Berkeley, CA

- Taught **80+** students full-stack development in JavaScript, Node.js, and React across a full semester.
- Eliminated **75+** hours of manual grading with Dockerized Node.js autograders for **7** assignments.

sKora Tech AI

Software Engineer Intern

May 2024 – Sept. 2024

Berkeley, CA

- Increased user engagement **30%** by leading a platform module integrating third-party REST APIs into React.
- Cut workflow completion time **20%** by defining specs with design and product, then shipping the features.
- Accelerated delivery by collaborating cross-functionally on specifications and new component integration.

SELECTED PROJECTS

Stock Forecast Platform | *Python, pandas, scikit-learn, Streamlit, Plotly, pytest*

[Live Demo](#)

- Built a Python pipeline engineering **14** technical indicators and comparing **4** interchangeable models.
- Shipped a CLI and public web app supporting any listed ticker over a configurable multi-year window.
- Wrote **16** automated tests covering caching, no-lookahead correctness, and forecast generation logic.

UCBMealz | *Python, JavaScript, React, Node.js, REST APIs, Selenium*

[DevPost](#)

- Built a full-stack meal service generating recommendations from scraped daily dining menu data and goals.
- Integrated the Google Gemini API to build recommendations from protein, carb, and calorie constraints.

BYOW (Build Your Own World) | *Java, Object-Oriented Design*

[Project Page](#)

- Co-designed a roguelike engine in Java with procedurally generated worlds and deterministic seeding.
- Built persistent save state that replays an entire game session from its full recorded input history.

TECHNICAL SKILLS

Languages: Python, Java, C, HTML, CSS, JavaScript, TypeScript, SQL.

Frameworks & Tools: React, Next.js, Node.js, REST APIs, Docker, pandas, NumPy, scikit-learn, pytest, Git.

Concepts: Data Structures, Algorithms, Object-Oriented Design, API Design, Unit Testing, Debugging, Code Review.
